

# Newly Single

# Introducing the: Packer/Chang IOL Cutting System, Single Use

The Packer/Chang IOL cutting system has been making IOL's "Cower In It's Presence" since 2007 when we introduced it as a durable use system. Our goal at that time was to help you be able to confidently cut even the hardest of foldable IOL's through the main incision with less corneal distortion as compared to ordinary IOL cutters. We invented a new method of making scissors to accomplish this.

Our world is a bit different seven years and countless easier IOL bisections later.

As a result, we developed a single use version of the Packer/Chang IOL cutting system with • Institutions with central cleaning departments • ASC's concerned about TASS • Anyone who is interested in using pristine instruments every single time, in mind.

If you are one of the many facilities that have our re-usable "MST Touch" forceps handles there is no need to buy a new handle as our single use heads are backwards compatible. If your facility doesn't have those handles we are introducing our new "MST Duet®" re-usable handles for single use heads DFH-1028.

The Packer/Chang IOL Cutting System, Single use. Only from MST.
